ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v126 strategy on VOXR failed, posting a -2.01% loss with a negative Sharpe of -0.05 and a paltry 33.3% win rate across only three trades. Such a minimal sample size renders the statistical significance virtually zero, meaning the observed drawdown of 11.32% is likely noise rather than a structural flaw. The parameters clearly require recalibration to improve entry timing and reduce volatility exposure before re-deployment. We must increase the trade count through extended backtesting windows to validate any parameter adjustments against the noise floor.
