ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1823 strategy generated a +42.10% ROI on LPG, yet a mere 3 trades renders statistical significance nearly impossible. While the 1.14 Sharpe ratio suggests decent risk-adjusted returns, the 21.82% drawdown indicates severe volatility exposure per position. The 66.7% win rate likely stems from survivorship bias rather than robust edge given the limited sample size. Expanding the backtest window to capture at least 50 trades is the mandatory next step before live deployment.
