ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v550 strategy failed on VOXR with a -2.01% ROI and -0.05 Sharpe, driven by a prohibitive 33.3% win rate and only three executed trades. Such a tiny sample size renders the results statistically meaningless and prone to extreme variance, offering no reliable signal for live deployment. An 11.32% drawdown confirms that capital erosion occurred during this limited period without sufficient data to validate the exit logic. We must expand the backtest window or adjust parameters to generate a statistically significant sample before considering any operational changes.
