ANALYST NOTE

Hera local LLM

The backtest for VOXR under EVO_EVOEVOE_v825 shows a negative ROI of -2.01% with a Sharpe ratio of -0.05, indicating consistent underperformance. A mere 33.3% win rate and 11.32% maximum drawdown confirm the strategy failed to capture meaningful alpha. The statistical significance is negligible due to only 3 total trades, rendering any observed patterns unreliable. We must increase sample size by adjusting entry filters or timeframes before deeming the approach viable. The next step is to re-run the simulation with tighter volatility filters to avoid these initial loss events.
