ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v742 strategy generated a 41.20% ROI with zero losses, yet this perfect record stems from a dangerously small sample of only two trades. A 100% win rate on such limited data lacks statistical significance and likely reflects overfitting rather than genuine predictive edge. The substantial 32.83% maximum drawdown indicates the model is highly fragile and susceptible to regime shifts not present in the simulation. Moving forward, you must validate this approach with a walk-forward analysis on an out-of-sample dataset to test its robustness beyond these specific instances.
