ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1246 backtest on PLMR yielded a marginal 0.43% ROI with a razor-thin win rate of 50%, driven by only two trades. A max drawdown of 14.67% combined with a Sharpe ratio of 0.14 signals poor risk-adjusted returns and low statistical confidence for any generalized conclusion. The sample size is critically insufficient to validate the strategy's edge or stability across varying market conditions. We must execute a larger sample backtest across multiple timeframes to confirm if the observed performance is an anomaly or a systemic flaw.
