ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1277 strategy on VOXR failed, generating a -2.01% drawdown with a -0.05 Sharpe ratio across only three trades. Such a small sample size lacks statistical significance to validate the logic or estimate true risk parameters with confidence. The 33.3% win rate indicates a negative expectancy that likely stems from poor signal quality or adverse market conditions. Before refining parameters, we must run a longer backtest on broader data to confirm whether this underperformance is a systemic flaw or random noise.
