ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1280 backtest on LPG shows a +42.10% ROI, yet the strategy executed only three trades, severely limiting statistical significance. A Sharpe ratio of 1.14 suggests acceptable risk-adjusted returns, but the 21.82% drawdown indicates high volatility exposure relative to the small sample. The 66.7% win rate is misleading without a larger dataset to confirm reliability across different market regimes. We must expand the backtest lookback period or adjust parameters to generate a robust sample size before live deployment.
