ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1343 strategy on META failed catastrophically, delivering a -17.50% ROI and 33.28% drawdown across only three trades. A zero win rate indicates a complete inability to identify profitable entry points under the current market regime. With such a minimal sample size, the negative Sharpe ratio of -0.85 lacks statistical confidence and may reflect random noise rather than a systematic flaw. The strategy must be discarded immediately and re-evaluated with modified stop-loss logic or a different time frame before further deployment.
