ANALYST NOTE

Hera local LLM

The ETH/USD TS-Momentum strategy failed decisively, losing over a third of capital with a negative Sharpe ratio of -1.45. Statistical significance is impossible with only three trades, suggesting the sample is too small to validate any alpha. The severe 37.64% drawdown indicates the momentum logic is overfitting or misaligned with current volatility regimes. Immediate action must be to reduce position sizing or switch to a trend-following filter rather than chasing mean reversion in this range.
