ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1427 backtest on AMD shows an 87.88% ROI, but a mere 2 trades render the 1.61 Sharpe ratio statistically insignificant. A 50% win rate with a 26.05% drawdown indicates high volatility exposure rather than robust predictive power. Confidence in this edge is currently negligible due to insufficient sample size to validate the strategy's consistency. We must expand the test period or adjust entry filters to generate enough signals for meaningful statistical analysis before deployment.
