ANALYST NOTE

Hera local LLM

The EVO strategy on LPG delivered a +42.1% return, yet the statistical significance is negligible with only three trades executed. A 66.7% win rate appears robust but is mathematically unstable given the tiny sample size, masking potential variance issues. The 21.82% maximum drawdown indicates high volatility risk that could erode gains during liquidation events. Increasing the backtest lookback period to 60 days would provide a more reliable distribution of outcomes. Until that data arrives, treat these results as hypothesis generation rather than operational proof.
