ANALYST NOTE

Hera local LLM

The ATLC Stochastic Oversold backtest shows a 33.51% ROI but suffers from extreme fragility with only four trades and a 25% win rate. The low trade count creates insufficient statistical confidence to validate the strategy's robustness against future market regimes. While the positive Sharpe ratio of 1.17 suggests decent risk-adjusted returns, a 26.20% maximum drawdown indicates significant vulnerability during volatility spikes. The strategy clearly needs parameter optimization to increase trade frequency and improve the win rate before deployment.
