ANALYST NOTE

Hera local LLM

The AMD backtest for EVO_EVOEVOEVOE_v2131 shows an 87.88% return but relies on only two trades, rendering the 50% win rate and 1.61 Sharpe ratio statistically insignificant. A 26.05% maximum drawdown highlights substantial volatility risk that is not adequately mitigated by the current signal logic. Without a larger sample size, performance metrics lack the confidence required for institutional deployment or strategy validation. I recommend running a robustness check with walk-forward analysis across different market regimes to confirm if the edge is genuine or a result of overfitting to this specific sample.
