+18.35%	0.82	66.7%	-17.18%

EQUITY CURVE

202 sessions · starting at \$10000.00

ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1739 strategy generated an 18.35% return on ASC, yet the statistical significance is negligible given only three trades executed. While the 66.7% win rate indicates strong directional bias, the 17.18% maximum drawdown exposes severe volatility risk that the low Sharpe ratio of 0.82 confirms. Such a small sample size creates high variance, making the observed performance unreliable for live deployment without further validation. A prudent next step is to expand the lookback period or adjust entry filters to generate at least 50 historical trades before trusting the equity curve.
