ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v888 strategy on AMD generated an 87.88% ROI with a 1.61 Sharpe, yet a mere 2 trades render these metrics statistically insignificant and highly prone to noise. While the risk-adjusted return appears robust, the 26.05% maximum drawdown indicates substantial volatility exposure that cannot be validated without a larger sample size. Relying on such a thin dataset creates a false sense of confidence, as the strategy lacks proven consistency across different market regimes. The primary next step is to execute a walk-forward analysis or expand the lookback period to generate at least 50 trades before deploying live capital.
