ANALYST NOTE

Hera local LLM

This NEAR/USD momentum strategy yielded a nominal 11.13% gain but failed statistically due to an extremely low sample size of three trades. The 33.3% win rate and 0.52 Sharpe ratio indicate poor risk-adjusted performance, while the 36.16% maximum drawdown reveals significant exposure to single trade volatility. Such a small dataset renders the results anecdotal and insufficient to validate the auto-momentum logic for production deployment. The primary failure mode is likely overfitting to a specific short-term price sequence rather than capturing a robust trend. Next, execute a walk-forward analysis with a 20-trade minimum threshold before considering any live allocation.
