ANALYST NOTE

Hera local LLM

The ONDO/USD TS-Momentum backtest shows a superficial +18.43% gain, yet the low win rate of 33.3% and severe 28.15% drawdown indicate a fragile strategy driven by mere three trades. Such a small sample size renders the 0.84 Sharpe ratio statistically insignificant, as the high drawdown suggests the model lacks robustness against volatile market regimes. While the momentum logic captured a specific trend, it failed to filter out noise, resulting in poor risk-adjusted returns relative to the exposure taken. The next step is to expand the parameter space across multiple market conditions to validate if this alpha is reproducible or merely a result of overfitting to a single event.
