ANALYST NOTE

Hera local LLM

The EVO_EVOWEBIDEA_v180 backtest for AMD shows an 87.88% gain with a 1.61 Sharpe, yet the statistical validity is critically weak given only two trades. A perfect 50% win rate on such a small sample lacks predictive power and masks significant regime-specific noise. The 26.05% maximum drawdown remains a serious risk factor that must be stress-tested across different market cycles before deployment. We must expand the lookback period and test on a larger dataset to confirm if this edge holds outside the current sample.
