ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v808 strategy on AMD delivered an 87.88% return with a 1.61 Sharpe, yet the 50% win rate and 26% drawdown suggest a high-risk, low-frequency approach rather than robust alpha. With only two trades, the statistical significance is negligible, making the 87.88% gain an outlier rather than a replicable edge. The strategy likely relies on a few large winners to offset losses, creating a fragile equity curve vulnerable to regime shifts. We must increase the sample size or adjust parameters to filter out noise before deploying capital.
