ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v604 backtest on RDN failed catastrophically, losing 5.59% on a negligible sample of three trades with zero wins and a negative Sharpe ratio of -0.31. Such a tiny dataset provides statistically insignificant results, rendering the 14.78% drawdown an unreliable predictor of future performance rather than a robust risk metric. The strategy clearly lacks a valid edge in this specific regime and cannot be deemed profitable without a significantly larger historical sample to validate signal logic. Next steps require re-running the test with extended historical data or adjusting entry filters to avoid these specific failure modes. We must treat these numbers as a diagnostic warning of structural flaws, not a definitive verdict
