ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v614 backtest on AMZN shows significant underperformance with a -4.83% ROI and a negative Sharpe ratio of -0.32, indicating the strategy destroys value during this sample. A win rate of 33.3% paired with only three total trades suggests the sample size is statistically insignificant and prone to high variance rather than reflecting true strategy efficacy. The maximum drawdown of 17.43% highlights substantial risk exposure that was not adequately mitigated by the current signal logic. Given the lack of robustness in a short trade history, the immediate next step is to expand the backtesting window to validate performance across different market regimes. This analysis remains educational and does not constitute
