ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v612 strategy generated +6.75% ROI on GOOGL, yet the +0.54 Sharpe ratio and -15.79% drawdown reveal poor risk-adjusted performance driven by three single trades. A 33.3% win rate with such low trade volume suggests the edge is statistically insignificant and likely overfit to a specific GOOGL price sequence. The strategy failed to capture enough winning trades to offset the severe drawdowns, indicating the signal logic lacks robustness. Next, increase the sample size by backtesting across multiple market conditions or optimizing the entry filter to reduce false signals.
