ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v883 strategy on RDN failed catastrophically, yielding a 0.0% win rate across only three trades and a 14.78% maximum drawdown. A Sharpe ratio of -0.31 confirms that losses significantly outweighed any gains, rendering the statistical sample size too small to draw meaningful conclusions. The backtest indicates a severe breakdown in risk management logic rather than a normal market correction. We must immediately pause execution and re-evaluate the entry conditions to prevent further capital erosion. Next, run a stress test on historical data with higher volatility to isolate the specific trigger causing these consistent failures.
