ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1718 strategy on LPG generated a +36.29% return, yet the statistical significance is negligible due to only 3 executed trades. While the 66.7% win rate and 1.04 Sharpe ratio appear promising, a 21.82% maximum drawdown on such a small sample suggests high volatility rather than sustainable alpha. Relying on these metrics for live deployment is risky as the results likely reflect overfitting or random noise rather than a robust edge. The primary next step is to expand the backtest period or adjust the entry logic to increase trade frequency for a more statistically valid evaluation.
