ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v84 backtest on AAPL shows a 10.7% gain, but the 50% win rate and low Sharpe of 0.87 reveal a lack of statistical significance given only two trades. An 11.5% drawdown indicates high volatility relative to the small sample, suggesting the edge is not yet robust for institutional deployment. The results likely reflect random noise rather than a persistent alpha, especially with such minimal transaction history. To validate the strategy, run a walk-forward analysis on additional data to confirm if the parameters hold outside the tested period.
