ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v707 strategy on RDN failed decisively with a -5.59% ROI and zero winning trades, indicating a complete regime mismatch. With only three trades executed, the Sharpe ratio of -0.31 offers zero statistical confidence to validate the approach. The 14.78% maximum drawdown suggests aggressive exposure without adequate stop-loss discipline during volatility. We must widen the lookback period to capture sufficient market cycles before deploying capital.
