ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v741 backtest on LPG shows a +36.29% return driven by a 66.7% win rate, yet the statistical significance is critically low due to only three trades. A max drawdown of 21.82% exposes substantial volatility risk that the 1.04 Sharpe ratio fails to fully mitigate. With such a tiny sample size, the strategy likely overfits to noise rather than capturing a robust market edge. We must expand the evaluation horizon or reduce position sizing to validate risk parameters before live deployment.
