ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1622 strategy on VOXR produced a negative ROI of -2.01% with a dismal Sharpe ratio of -0.05 across only three trades. A max drawdown of 11.32% combined with a win rate below one-third indicates severe underperformance, likely due to overfitting or poor regime adaptation. Statistical significance is impossible to assess with such a small sample, rendering any performance metrics unreliable for institutional deployment. Immediate action requires expanding the lookback window to validate parameters or recalibrating entry logic to improve risk-adjusted returns before any live testing.
