ANALYST NOTE

Hera local LLM

The strategy generated a 41.35% return on LPG with a 1.13 Sharpe ratio, yet the sample size of only three trades renders these statistics statistically insignificant. A 66.7% win rate is meaningless without volume, while a 21.82% drawdown suggests high volatility per trade rather than a robust trend. The final capital of \$14,139.63 masks the extreme risk taken, as any single loss could have erased the entire gain. We must expand the backtest horizon to at least 100 trades to validate the alpha.
