ANALYST NOTE

Hera local LLM

The strategy generated a +46.62% return on SM with a perfect 100% win rate, yet the sample size of only two trades renders these statistics statistically insignificant. A maximum drawdown of 32.83% indicates excessive exposure risk that contradicts the illusion of flawless performance. The low Sharpe ratio of 1.32 suggests the gains are driven by volatility rather than consistent alpha. I must expand the backtest to at least 100 trades to validate the strategy's robustness before institutional deployment.
