ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1085 strategy on BTC-USD failed fundamentally, posting an -11.23% return with a Sharpe ratio of -0.69 and a severe 24.12% drawdown. Such poor performance across only four trades indicates statistically insignificant results that cannot be generalized to live markets. The low win rate of 25.0% suggests the entry logic is flawed or highly sensitive to current volatility regimes. Before attempting optimization, we must verify if the sample size was an anomaly or a structural failure of the model. The immediate next step is to review the specific trade logs to identify the precise conditions triggering these losing entries.
