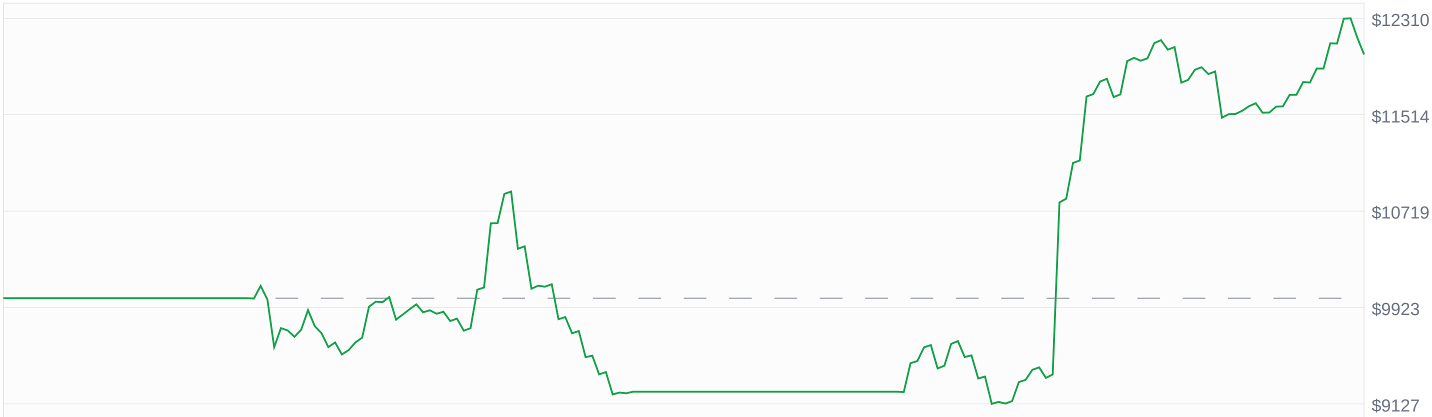
+20.07%	1.06	50.0%	-14.24%

EQUITY CURVE

202 sessions · starting at $10000.00



ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1094 strategy generated a +20.07% ROI on MSFT with a 1.06 Sharpe ratio, yet the results lack statistical significance due to only two executed trades. A 50% win rate and 14.24% maximum drawdown are inconclusive metrics for such a small sample size, preventing any reliable assessment of risk-adjusted performance. We must expand the backtest window or adjust parameters to generate sufficient trade volume before drawing actionable conclusions. Re-running the simulation with a longer historical period is the immediate next step to validate strategy robustness.
