ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1245 strategy on NVDA failed to capture value, posting a negative return with a dismal 33.3% win rate across only three trades. A maximum drawdown of 23.49% and a Sharpe ratio near zero indicate poor risk-adjusted performance that suggests the signal logic is currently ineffective. Such a limited sample size renders the results statistically insignificant and insufficient to draw firm conclusions about the strategy's long-term viability. Before considering further deployment, we must expand the backtesting horizon and adjust entry parameters to address this severe underperformance.
