ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1866 strategy on RDN failed catastrophically, recording three losing trades with a zero percent win rate and a negative Sharpe ratio. With only three executed trades, the sample size is statistically insufficient to draw any reliable conclusions about the strategy's long-term viability or risk profile. The severe 14.78 percent maximum drawdown indicates a lack of effective stop-loss mechanisms or a fundamental flaw in the entry logic under current market conditions. Immediate parameter optimization or strategy revision is required before any further capital is allocated to this approach.
