ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1882 backtest on BTC-USD exhibits catastrophic failure, with a -11.23% ROI and a 24.12% maximum drawdown driven by only four trades. A 25% win rate combined with a negative Sharpe ratio of -0.69 indicates that the strategy's logic is statistically invalid rather than a result of mere sampling error. The extremely low trade count prevents any meaningful assessment of risk-adjusted returns or consistency across different market regimes. Consequently, the strategy requires immediate parameter re-optimization or a fundamental redesign of its entry signals before any live deployment is considered.
