ANALYST NOTE

Hera local LLM

The VOXR test for EVO_GG1RSISNIP_v1452 failed to generate alpha, losing 2.01% with a negative Sharpe ratio of -0.05. The 33.3% win rate and 11.32% drawdown indicate poor risk-adjusted returns driven by only three trades. Such a tiny sample size lacks statistical significance, rendering the negative outcome anecdotal rather than indicative of systemic strategy failure. We must increase sample size via parameter optimization or shift focus to assets with higher volatility before deeming the logic flawed. The next step is to run a walk-forward analysis on a larger dataset to validate the entry conditions.
