ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v2374 backtest on VOXR is statistically insignificant with only three trades, rendering the -2.01% loss and -0.05 Sharpe ratio noise rather than evidence of strategy failure. A win rate of 33.3% coupled with an 11.32% maximum drawdown indicates severe instability and poor risk-adjusted returns. Without sufficient trade data, any performance metric lacks the confidence interval necessary for institutional decision-making. We must expand the historical window and vary market regimes to validate the logic before deploying live capital.
