ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1743 backtest on SM shows a perfect 100% win rate and 46.62% ROI, but these metrics are statistically meaningless due to only two trades. A maximum drawdown of 32.83% indicates severe volatility exposure that the current sample size cannot validate. We must reject this strategy as viable until it generates data from a minimum of 100 trades. The next step is re-running the backtest with tighter filters to increase trade frequency and assess robustness.
