ANALYST NOTE

Hera local LLM

The XTZ/USD Stochastic Oversold strategy failed catastrophically with zero winning trades and a 39% drawdown, indicating the model is either misaligned with current volatility or requires a complete parameter overhaul. A sample size of only three trades provides insufficient statistical significance to validate or reject the hypothesis, rendering the negative Sharpe ratio of -1.40 a likely artifact of overfitting or extreme noise rather than a robust alpha signal. The total loss of 34.76% confirms that the current entry conditions are systematically triggering losses during XTZ's specific down-trends. The immediate next step is to restrict live deployment until a backtest on a 30-day forward dataset demonstrates a minimum of 50 winning
