ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1552 strategy on RDN failed catastrophically, delivering zero wins and a 14.78% drawdown across merely three trades. With a Sharpe of -0.31 and a negative ROI, the sample size is statistically insufficient to confirm regime breakdown or genuine strategy failure. The signal generation logic likely lacks robustness in current market conditions, resulting in a high probability of overfitting. We must expand the backtest horizon to identify structural flaws before deploying live capital. Re-running with expanded parameters or alternative filters is the mandatory next step to validate viability.
