ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v2388 strategy on SM delivered a +46.62% ROI with a flawless 100% win rate, yet this perfect record is statistically insignificant due to only two total trades. The strategy's 32.83% maximum drawdown is disproportionately high relative to the low trade count, suggesting overfitting or extreme position sizing risk rather than robust edge. While the 1.32 Sharpe ratio indicates positive risk-adjusted returns, the sample size is too small to confirm reliability or generalizability across market regimes. The primary next step is to run an out-of-sample backtest with a wider parameter grid to validate whether the strategy holds outside its current training data.
