ANALYST NOTE

Hera local LLM

The GG7 Williams oversold strategy on ONDO/USD generated 18.43% returns but relies on only three trades, rendering the 33.3% win rate and 0.84 Sharpe ratio statistically insignificant. A severe 28.15% drawdown indicates high volatility exposure rather than robust trend-following mechanics. The signal logic likely entered late during corrections, missing the bulk of the upside while exposing capital to deep retracements. We must expand the sample size by running a longer historical backtest or combining the oversold filter with a volume confirmation rule to validate edge.
