ANALYST NOTE

Hera local LLM

The SKY/USD backtest shows a marginal 6.56% gain but suffers from severe statistical unreliability due to only two trades. A win rate of exactly 50% and a Sharpe ratio of 0.40 indicate that the stochastic oversold logic fails to capture sufficient risk-adjusted alpha. The 29% drawdown reveals excessive volatility exposure for a sample this small, rendering the strategy statistically insignificant. We must expand the sample size by running a walk-forward analysis to validate robustness before live deployment.
