ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1812 strategy on RDN failed catastrophically, recording zero winning trades and a negative Sharpe ratio of -0.31, indicating a systematic inability to navigate current price action. With only three trades executed, the sample size is statistically insignificant, rendering these results unrepresentative of the strategy's true long-term expectancy. The 14.78% maximum drawdown suggests the strategy's parameters are misaligned with the asset's volatility or trend regime. We must re-evaluate the signal logic against fresh market data rather than deploying this configuration live.
