ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2140 backtest on RDN failed completely, delivering a -5.59% ROI with zero winning trades and a 14.78% drawdown across only three executions. A Sharpe ratio of -0.31 confirms a statistically insignificant strategy with no risk-adjusted profit potential given the extremely small sample size. The strategy likely suffered from overfitting or poor parameter selection, as it cannot generate alpha on this asset under current market conditions. The immediate next step is to discard this configuration and retest with a different timeframe or asset class to validate robustness.
