ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v2156 strategy on AMZN failed, delivering a -6.61% ROI with a negative Sharpe ratio of -0.47. The sample size of only three trades renders the 33.3% win rate statistically insignificant and unreliable. A 17.84% maximum drawdown indicates severe vulnerability to adverse price moves during the test period. The primary failure appears to be a lack of robustness against short-term volatility rather than a fundamental flaw in the core logic. We must expand the backtest window to gather sufficient data points before deploying capital.
