ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v2242 backtest on META failed catastrophically, yielding a -17.50% ROI and zero winning trades, indicating a severe misalignment with current market conditions. With only three transactions recorded, the statistical power is negligible, making the -33.28% peak drawdown and negative Sharpe ratio statistically insignificant rather than definitive proof of strategy failure. The lack of any profitable outcomes suggests the entry logic requires immediate parameter recalibration or a complete structural overhaul. Before deploying live capital, you must run a new simulation on a longer historical window to validate whether this underperformance is a one-off anomaly or a systemic flaw in the signal generation.
