ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2314 backtest on RDN shows a catastrophic failure with zero winning trades and a negative Sharpe ratio of -0.31. This sample size of just three trades is statistically insignificant, rendering the -14.78% drawdown unrepresentative of real-world performance. The strategy logic likely fails to capture RDN's volatility regime or lacks necessary risk filters. I will re-run the simulation with a wider parameter grid and stricter stop-loss conditions to validate robustness before deployment.
