ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2271 strategy on PLMR yielded a meager 0.43% ROI with a Sharpe of 0.14, driven by only two trades. A maximum drawdown of 14.67% indicates significant volatility risk, while a 50% win rate offers no statistical edge given the minimal sample size. The low trade count renders the results unreliable for drawing robust conclusions about the strategy's long-term viability. We must expand the testing window or adjust parameters to generate sufficient data points before considering live deployment.
